

# Newsletter 28

Contents:  
=====

- A reminder on the Usenet vote
- Update of TC10 WWW homepage
- Subscription to MVA at reduced rate
- Some details about GREC'95
- ICIP95 accepted papers list
- ICCV95 early registration deadline
- Early Registration Deadline extension for Workshop on Rep. Vis. Scenes
- CFP - ISPRS'96

This is a short TC10 news to disseminate rapidly several pieces of information. Some days ago, I sent out a copy of a Call for Votes for two Usenet newsgroups on document analysis. Please, please, DON'T SEND your ballots to the TC10 mailing list. Send them to the vote-taker. Check your E-mail "To:" field before sending your mail. Check also that the TC10 mailing list is NOT in the "Cc:" field or whatever other field leading to the fact that we all receive your vote.

I also take this opportunity to announce that the WWW homepage for TC10 has been updated. The URL is the same, but feel free to check the new version and tell me about any errors/omissions/corrections to be made. It's the WWW URL: <http://www.loria.fr/~tombre/tc10.html>

I have laso recently received a copy of a letter from the IAPR president J. Kittler reminding us that reduced subscription rates to the MVA journal have been offered to IAPR members. This has been announced twice in the IAPR Newsletter so this is just a reminder... So if you're active in your local IAPR member society, please pass on the reminder message...

-----  
If you are interested in the coming workshop on graphics recognition, here are some details (I have included here several excerpts from mails by Kasturi):

The registration information and instructions for authors are mailed out to all authors these days, from Pennsylvania State University. The paper submission deadline has been extended to June 25, 1995. Length limit for papers is 10 formatted pages.

To make it easier for authors to write their paper, I have written a template LaTeX file following the instructions to authors. This file is written for the last version of LaTeX (LaTeX2e) but it shouldn't be that difficult to adapt it to older versions. The file is available through anonymous ftp.

Co-authors, program committee members and sponsors should be able to attend the workshop without paying any registration fee. There will be a \$75 fee for everyone else. Workshop registration fees will include lunch and banquet and so the expenses would be minimum to participants (room rates are around \$85).

The evaluation protocol for the dashed-line detection contest has been worked on at prof. Haralick's group. A complete document will be made available very soon now. Don't forget (if you haven't done it yet) to "register" for the contest, i.e. to tell the workshop organizers that you will be participating, in order for us to plan sufficient equipment and time for everybody to participate.

The program brochure is being printed out these days and will be mailed out to a large list of people. If you want to get it for registration, please tell us...

-----  
If you're interested (or you submitted) to IEEE ICIP'95, here is the list of accepted papers:

\*\*\*\*\*

7 Reduced Dimension Image Compression for Remotely Distributed Underwater Signal Processing  
8 Image Interpretation of Topographic Maps on a Medium Scale via Frame-based Modelling  
13 Features for Recognition of Projectively Deformed Point Sets  
15 Histogram Modification via Partial Differential Equations  
18 Invariant Features of a Blurred Image  
19 An Image Reorganization Procedure for Automotive Road Following Systems  
22 Towards 3-Dimensional Optical Image Processing  
23 Machine Perception and Visualization of Line Images  
25 Designing OSED's (Order Statistic Edge Detectors)  
26 Using Prolog to Implement a Compiler for a Parallel Image Processing Language  
29 On Morphological Openings and Closings of Signals in Shaped Noise  
31 Architectures for MPEG Compressed Bitstream Scaling  
32 Design of Multistage Weighted Order Statistic Filters by A Neural Network  
35 Objective Picture Quality Scale for Color Image Coding  
38 3D Vision from 2D Images  
39 Half-toning Using Statistical Methods  
40 Estimating Adaptive Kernels from Local Image Grey Value Changes  
43 On the Morphological Analysis of Binary Random Fields  
45 Detection of Virus Particles in Noisy Spot-Scan Electron Cryomicroscopy Images  
50 Novel Fast Block Motion Estimation in Feature Subspace  
59 Low Bit Rate Model-Assisted H.261-Compatible Coding of Video  
60 An Universal Algorithm for Grey Level, Color, and Texture Image Segmentation  
66 Image Restoration Using Layered Neural Networks and Hopfield Networks  
74 Analysis and Classification of Myocardial Tissue With the Wavelet Image Extension  
80 An Efficient Heuristic-based Motion Estimation Algorithm  
81 Image Sequence Coding Using a Contour-based Method  
82 A New Stabilized Zero-Crossing Representation in the Wavelet Transform Domain and Signal Reconstruction  
83 High-Resolution Image Acquisition Based on Temporal Integration with Hierarchical Estimation of Image Warping  
84 Global Motion Segmentation for Mid-level Representation of Moving Images  
85 A Rational Edge-preserving Smoother  
89 Object Oriented Motion and Deformation Estimation Using Composite Segmentation  
92 Weighted Universal Transform Coding: Universal Image Compression with Karhunen Loeve Transform  
93 Adaptive Overlapping Approach for DCT-Based Motion Estimation  
94 Neural Implementation of Arma type Filters for Image Restoration  
96 On Ill-posed Anisotropic Diffusion Models  
97 Neural Network Vector Predictors with Application to Image Coding  
98 Entropy-constrained predictive Residual Vector Quantization of Digital Images  
110 Morphological Contour Coding Using Distance Functions Optimized by Genetic Algorithms  
111 Motion Estimation and Segmentation by Fuzzy Clustering  
112 A Multiple Person Eye Contact (MPEC) Teleconferencing System  
113 Analysis of the Optical Array Imaging System and Construction of An Adaptive Focusing Algorithm  
115 Adaptive Gabor Image Transformation: Application in Scientific Visualization  
119 An Error Analysis of Camera Translation Direction Estimation from Optical Flow Using Linear Constraints  
120 A Modified Dichromatic Reflection Model for an Analysis of Interreflection  
122 Vector Quantization by Packing of Embedded Truncated Lattices  
123 Determination of Singular Points in 2D Deformable Flow Fields  
125 Variable Resolution Markov Modeling of Signal Data for Image Compression  
126 Variable Decay Rate Histogram Modeling for Image Compression  
127 A Recursive Nonlinear Filter for Removal of Impulse Noise  
128 Smooth Surface Reconstruction From Image Sequences  
129 Using Multiple Coaxial Images for Determining the Focal Gradient in a Range Camera  
133 Multivariate MTM Filters - Analysis and Design Options  
134 Non-iterative Multiple Motion Estimation Using Harmonic Retrieval Techniques  
135 Estimating Image Motion from Motion Smear; a Sensor System and Extensions  
136 Projection Estimation in 3D PET Reconstruction: a Statistical Evaluation  
137 Recovery of Human Facial Features Using Uncalibrated Cameras  
138 Perceptual Optimization of Image Coding Algorithms  
142 Color Image Analysis Using Fuzzy Set Theory  
144 Image Smoothing Based on Pixel Grouping  
151 Regularisation of the Limited Data Computed Tomography Problem via the Boundary Element Method  
152 Two-Dimensional Periodic Digital Filters  
153 Statistical Classification and Segmentation of Biomolecular Surfaces  
155 Lenticular Autostereoscopic Imaging and Displaying Techniques With No Special Glasses  
156 An Image Enhancement Technique Based on the FIRE Operator  
160 A Pyramid Algorithm for Fast Fractal Image Compression  
165 Segmenting Internal Structures in 3D MR Images of the Brain by Markovian Relaxation on a Watershed Based Adjacency Graph  
166 Combining Vector Median and Vector Directional Filters: The Directional-Distance Filters  
168 Nonlinear Image Restoration Using FFT-based Conjugate Gradient Methods  
173 Parallel Complexity of the Medial Axis Computation  
174 Computing the Medial Axis Transform in Parallel with 0 (1) Scan Operations  
175 The Optical Tomographic Method in Medicine  
176 Development of a VLSI Chip for Real Time MPEG-2 Video Decoder  
177 Spatiotemporal Model-Based Optic Flow Estimation  
178 Spatio-temporal Segmentation Based on Motion and Static Segmentation  
179 Local Orthogonal Bases  
181 Subband Adaptive Regularization Method for Removing Blocking Effect  
184 Multigrid Adaptive Image Processing  
185 Constrained and General Dynamic Rate Shaping of Compressed Digital Video  
187 Comparison of Wavelet Transform Features for Texture Image Annotation  
189 Metamerism in Image Operator Families  
194 Visual Masking and The Design of Magnetic Resonance Image Acquisition  
196 True-Velocity Duplex Imaging Using A Single Transducer  
200 Recognition of Handwritten Persian/Arabic Numerals by Shadow Coding and a Probabilistic Neural Network  
201 Curvature Measurement of 3D Objects: Evaluation and Comparison of Three Methods  
203 Vector Restoration for Video Coding  
204 Novel Contrast Pyramid Coding of Images  
206 Detecting and Estimating Structure Regularity of Soft-Tissue Organs from Ultrasound Images  
207 Wavelet Transform Matched Filters for The Detection and Classification of Microcalcifications in Mammograms  
212 Automatic Aircraft Landing Using Interferometric Inverse Synthetic Aperture Radar Imaging  
216 Design of 2-D State-Space Digital Filters with Powers-of-Two Coefficients Based on a Genetic Algorithm  
221 Low Bit Rate Video Coding Based on Generalized Prediction of the Pyramid Subband Decomposition  
222 Use of Space Filling Curves In Fast Encoding of VQ Images  
224 Coherent Array Imaging with Sparse Arrays  
235 3D Super-Resolution Using Generalized Sampling Expansion  
236 Contextual Vector Quantization Modeling of Handprinted Chinese Character Recognition

238 Rate-Distortion Performance for Joint Source and Channel Coding of Images  
239 Estimation of Nonuniform Image Motion Parameters in the Presence of Noise Using the EM Algorithm  
241 Radar Imaging of Three-Dimensional Surfaces Using Limited Data  
246 Error Diffusion with Ink Reduction for High Quality and High Resolution Ink Jet Printing  
247 Errors in the Estimation of Gradient Direction using IIR and FIR Implementations  
248 Variable Block Size Lapped Transforms  
250 Robust Shape Description and Recognition by Gradient Propagation  
255 Optimal DSNR Detector for Ramp Edges  
256 Analysis of Functional Magnetic Resonance Images by Wavelet Decomposition  
259 A New Programmable VLSI Architecture for Histogram and Statistics Computation in Different Windows  
260 Image Modeling and Restoration Through Contagion Urn Schemes  
261 GMRF Models and Wavelet Decomposition for Texture Segmentation  
267 Fractal Color Image Compression Using Vector Distortion Measure  
268 Inverse Halftoning of Scanned Images  
269 Adaptive Piecewise Linear Bits Estimation Model for MPEG Based Video Coding  
271 Scalable Coding Schemes Based on DCT and MC Prediction  
276 Modeling and Design of Multidimensional Vector-Quantized M-Channel Subband Coders  
277 Moire Based Matching Technique  
282 Time-efficient Computations for Topological Functions in 3D Images  
283 Segmentation of Molecular Surfaces Based on Their Convex Hull  
284 Image Enhancement Based on Fuzzy Logic  
286 Evaluation of Edge Detectors Performances with a Discrete Expression of Canny's Criteria  
289 Novel Fractal Image Compression Method with Non-iterative Decoder  
290 Non-iterative Postprocessing Technique for Transform Coded Image Sequence  
291 Near-Lossless Image Compression: Minimum-Entropy, Constrained-Error DPCM  
293 A Hierarchical Neural Network Architecture That Learns Target Context: Applications to Digital Mammography  
300 A Bayesian Method for Triangulation  
301 Receiver Operating Curves and Optimal Bayesian Operating Points  
302 Constrained Monotone Regression of Receiver Operating Curves and Histograms Using Splines and Polynomials  
303 On Comparing the Performance of Object Recognition System  
304 Tracking Human Motion in an Indoor Environment  
305 Combining Symbolic with Numeric Attributes In Multi-class Object Recognition Problems  
307 Synthesis of Virtual Views Using non-Lambertian Reflectivity Models and Stereo Matching  
309 Motion Based Image Segmentation for Video Coding  
310 A Multi-Resolution Approach for Imaging Hydraulic Conductivity  
312 Image Coding with Wavelet Representations, Edge Information and Visual Masking  
316 Three-Dimensional Fractal Video Coding  
317 Motion Estimation and Representation of Arbitrarily Shaped Image Regions  
318 An Efficient Watershed Algorithm Suitable for Parallel Implementation  
321 Tree Pruning Strategy in Automated Detection of Coronary Trees in Cineangiograms  
322 Measures of Information Content for Computerized Ionospheric Tomography  
323 A New Iterative Algorithm for Ionospheric Tomography  
325 Qualitative Comparison of Visual Models in an Iterative Halftoning Procedure  
326 A Wavelet Video Coder Using Entropy-Coded Trellis Coded Quantization  
327 Genetic Algorithms for Object Recognition in a Complex Scene  
328 Optimizing Bit-plane Context-dependent Entropy Coding for Palettized Images  
329 Ultrasound Speckle Reduction by Directional Median Filtering  
331 Summetric Wavelet Edge Detector of the Minimum Length  
332 Cardiac SPECT Restoration using MR-based Support Constraints  
333 Reconstruction from the Multi-Component AM-FM Image Representation  
334 A Scalable Wavelet Image Coding Scheme Using Multi-Stage Pruned Tree-Structured Vector Quantization  
335 Acoustic Driven Viseme Identification for Face Animation  
336 3-D Video Compositing: Toward a Compact Representation for Video Sequences  
337 Content-Based Video Sequence Representation  
338 Multi-Frequency Eddy Current Image Processing Techniques for Nondestructive Evaluation  
339 Preprocessing of Video Signals  
341 Binocular Motion and Structure Estimation from Long-Sequence Rotational Flows Without Correspondence  
344 MRF-based Motion Segmentation Exploiting a 2D Motion Model Robust Estimation  
345 The Steerable Pyramid: A Flexible Architecture for Multi-Scale Derivative Computation  
346 Selection of Observations in Magnetic Resonance Spectroscopic Imaging  
348 A Lattice Vector Quantizer with Polytopal Boundary  
350 Reconstruction of a High-Resolution Image by Simultaneous Registration, Restoration, and Interpolation of Low-Resolution Images  
351 DVF Estimation in the Presence of Noise Using Accurate Gradient Estimation  
352 Regularized Motion Estimation Using Robust Entropic Functionals  
354 A Wavelet Based Edge Detector  
356 Optimizing Wavelet Transform Based on Supervised Learning for Detection of Microcalcifications in Digital Mammograms  
357 Congestion Control for Data Partitioned MPEG-2 Video Transmission Over ATM based Networks  
358 Interactive and Intuitive Segmentation of Volumetric Data: The Segment VIEW System and the Kooshball Algorithm  
360 Stochastic Formulations of Optical Flow Algorithms under Variable Brightness Conditions  
362 Adaptive 3-D Segmentation Algorithms for Microscope Images Using Local In-focus, and Contrast Features: Application to PAP Smears  
363 An Improved Watershed Algorithm for Counting Objects in Noisy, Anisotropic 3-D Biological Images  
364 Real-Time Image Processing Algorithms for an Automated Retinal Laser Surgery System  
366 Focus of Attention (FOA) Identification from Compressed Video for Automatic Target Recognition (ATR)  
367 A Gradient-Based Rate Control Algorithm with Applications to MPEG Video  
369 Multiresolution Video Compression Using Wavelet Transform and Motion Compensation  
371 A New Approach to Aperture Synthesis Using Frequency Diversity Imaging  
372 Nonlinear Filtering Using Generalized Subband Decomposition  
373 Wavelet Transform and Bit-Plane Encoding  
375 Automatic EO/IR Sensor Image Registration  
376 A Statistically-Based, Two Stage Method for Image Formation from Scattered Radiation  
378 Software Only Scalable Video Delivery System for Multimedia Applications over Heterogeneous Networks  
379 Compression Based on Tree Structured Vector Quantization of Perceptually Weighted Generic Block, Lapped, and Wavelet Transforms  
380 Strategy for Shape-Based Image Analysis  
381 Video Transport in Wireless ATM  
382 Video Coding with 3D-DCT and Motion Compensation  
383 Coding for Content: Enhanced Resolution from Coding  
386 Face Location in Wavelet Based Video Compression for High Perceptual Quality Videoconferencing  
387 Adaptive Quantization with Spatial Constraints in Subband Video Compression Using Wavelets  
389 A Fast Algorithm for Video Parsing Using MPEG Compressed Sequences  
390 Multiresolution Sequential Edge Linking  
391 Multiresolution using Multisplines for Image Compression  
392 A Neural Network for Breast Cancer Detection using Fuzzy Entropy Approach  
394 Digital Diffusion Network for Image Segmentation  
395 Vector Quantization of Images Using  $L_{\infty}$  Distortion Measure  
397 A Subspace Method for Maximum Likelihood Target Detection

398 Improved Decoding of Compressed Images Received over Noisy Channels  
399 Parallel Computation of Sequential Pixel Updates in Statistical Tomographic Reconstruction  
400 Iterative Multi-scale Registration Without Landmarks  
401 Combined Fourier/Diagonal Preconditioning Methods for Image Reconstruction in Emission Tomography  
402 Object-oriented Coding Using Successive Motion Field Segmentation and Estimation  
403 Localized Wavelet Based Computerized Tomography  
404 Scalable High-definition Video Coding  
405 Syntax-based Arithmetic Video Coding for Very Low Bitrate Visual Telephony  
406 3D Head Pose Computation from 2D Images: Templates Versus Features  
409 Pyramid-Based Texture Analysis/Synthesis  
412 Embedded Pyramid Coding of Displaced Frame Differences  
414 Model-Based Obstacle Detection From Image Sequences  
417 Image Registration Using Both Distance and Angle Information  
418 Sequential Processing of SAR Phase History Data for Rapid Detection  
419 A Theory of Parameter-Dependent Connected Components of Gray Images and Segmentation  
421 A 3-D Robust Range Feature Extraction Tool for Industrial Automation Applications  
422 Image Fusion Using Steerable Dyadic Wavelet Transform  
423 Multi-Resolution Recursive Video Coding  
424 Adaptive Methods for Dithering Color Images  
426 A New Error Criterion for Block Based Motion Estimation  
427 Constrained Image Recovery in a Product Space  
433 Adaptive Multichannel Distance Filters  
436 Direct Enumeration and Size Distribution of Soil Bacteria Using Confocal Laser Scanning Microscopy and Image Analysis  
442 Edge Detection Operators for Angular Data  
443 Three Dimensional Subband Video Transmission Through Mobile Satellite Channels  
450 Application of the Cluster Approximation for the Simultaneous Restoration and Segmentation of Tomographic Images  
451 Reconstruction of Viruses from Solution X-Ray Scattering Data  
453 A Theoretical Study on an Accurate Reconstruction of Multiview Images Based on the Viterbi Algorithm  
456 A Sequential Algorithm for Motion Estimation from Point Correspondences with Intermittent Occlusions  
459 Regularized Normalized Total Least-Squares Restoration from Partially Known Space-Varying Blur for Tomographic Reconstruction  
460 DCT and Wavelet Based Representations of Arbitrarily Shaped Image Segments  
461 Spatiotemporal Junction Analysis for Motion Boundary Detection  
463 Statistical Properties of Prediction Error Images in Motion Compensated Interlaced Image Coding  
464 Explicit Link Between Local Fractal Transform and Multiresolution Transform  
465 Generalized Interpolators for Advanced Movement-Compensated 50Hz - 60Hz Conversion of Interlaced Sequences  
466 Optical Flow Techniques Applied to Video Coding  
467 A Decoding Method for Reducing Vector Quantization Complexity  
468 An Adaptive Rate Allocation Scheme for Subband Compression  
470 Modeling Center of Image Trajectory Under Changing Focal Length  
472 A Data Fusion Approach to Tumor Delineation  
475 Fractal Dimension Estimation Using Continuous Alternating Sequential Filter Pyramid  
476 Estimation of Fractal Dimension Using Alternating Sequential Filters  
483 Object Segmentation in Active Mesh Representation of Videos: Comparison of Parallel and Sequential Approaches  
486 Three Dimensional Adaptive Wavelet Packet for Video Compression  
489 Region-Adaptive Transform Based on a Stochastic Model  
490 Motion Estimation for Region-Based Video Coding  
492 Unsupervised Segmentation of Dual-echo MR Images By a Sequentially Learned Gaussian Mixture Model  
493 Depth-from-motion Estimation Based on a Multiscale Analysis of Motion Constraint Equation Validity  
495 Motion Compensation of Motion Vectors  
496 Layered Transmission of Video Over Power-Constrained Wireless Channels  
497 An Optimization of MPEG to Maximize Subjective Quality  
498 Relaxation Labeling Using Lagrange Multipliers and Hopfield Network  
501 Enhancement of JPEG Coded Images by Adaptive Spatial Filtering  
504 Inexhaustive Region Segmentation by Robust Clustering  
515 A Markov Random Field For Linear Structure Extraction in Pavement Distress Image Analysis  
516 Spatio-temporal Segmentation of Image Sequences for Object-oriented Low Bit Rate Image Coding  
523 Object-Based 3-D Motion and Structure Estimation  
526 Image Interpolation Using a Simple Gibbs Random Field Model  
528 Highly Efficient Coding Schemes for Contour Line Drawings  
529 Modelling and Restoration of Multilook Correlated Speckled Images  
530 Color Image Restoration and Parameter Estimation in a Multiresolution Framework  
533 Extraction of Facial Sketch Images and Expression Transformation Based on FACS  
534 Embedded Zerotree Based Lossless Image Coding  
536 Affine Motion Estimation Using Neural Network  
538 Restoration of Historic Film for Digital Compression: A Case Study  
539 Progressive Video Coding for Storage Applications  
540 Zero-Crossings of a Non-orthogonal Wavelet Transform for Complex Object Location  
541 Interferometric Image Reconstruction as a Nonlinear Bayesian Estimation Problem  
543 An Asymmetric Lossless Image Compression Technique  
545 Optimum Linear Approximation of the Euclidean Norm to Speed Up Vector Median Filtering  
546 Rate Control for Video Coding Over Variable Bit Rate Channels with Applications to Wireless Transmission  
548 Single Color Extraction and Image Query  
549 Maximum Likelihood Hyperparameter Estimation of Gibbs Priors for Bayesian Inverse Problems in Image Processing  
550 Joint Source Channel Coding of Images with Trellis Coded Quantization and Convolutional Codes  
552 Adaptive Block Matching Motion Estimation Algorithm Using Bit-Plane Matching  
554 Two-dimensional Object-based Coding Using Irregular Meshes, Layered Motion Representation, and Temporal Tracking  
555 Image Resizing in the Discrete Cosine Transform Domain  
556 A New Frame Interpolation Scheme for Talking Head Sequences  
557 Differences Between an Object-based Analysis-synthesis Coder Based on the Source Model of Moving Flexible 2D-Objects and a Block-based Hybrid Coder Based on TMN4  
560 Figure-ground Separation by a Neural Dynamic System  
561 Region-based Stereo Image Coding  
562 Toward a Robust Parametric Identification of Motion on Regions of Arbitrary Shape by Non-linear Optimization  
563 Data-rate Constrained Lattice Vector Quantization: A New Quantizing Algorithm in a Rate-Distortion Sense  
564 Estimating Cardiac Motion from Image Sequences Using Recursive Comb Filtering  
565 Detection and Labeling of Retinal Vessels for Longitudinal Studies  
566 Computationally Fast Bayesian Recognition of Complex Objects Based on Mutual Algebraic Invariants  
568 A New Method for Camera Motion Parameter Estimation  
571 Surface Generation for Virtual Reality Displays with a Limited Polygonal Budget  
572 Efficient Implementations of Steerable-Scalable Filters  
576 Matching Pursuit of Images  
577 Real Time Image Enhancements for Both Text and Color Photo Images  
578 On the Use of Duration-Corrected N-best Hypotheses in Classification and Minimum Error Rate Training for Document Recognition  
579 New Robust Image Operators and Applications in Automatic Facial Feature Analysis

580 Joint Source/Channel Coding for Multicast Packet Video  
581 The Role of Feature Visibility Constraints in Perspective Alignment  
584 Multi-Channel Restoration of Electron Micrographs  
586 Region Segmentation Using Edge Based Circle Growing  
588 Multiscale Geometrical Feature Extraction and Object Recognition with Wavelets and Morphology  
589 Multiresolution Model Development for Overlapping Trees via Canonical Correlation Analysis  
593 A Novel Volumetric Features Extraction Technique, with Applications to Biomedical Images  
599 Adaptive Binary Vector Quantization Using Hamming Codes  
601 The Polynomial Phase Difference Operator for Modeling of Nonhomogeneous Images  
602 Key Extraction by Image Differentiation  
603 Image Processing Techniques for Bone Image Analysis  
609 3-D Shape Recovery of Hybrid Reflectance Surface Using Indirect Diffuse Illumination  
612 Construction and Properties of B-spline Wavelet Filters for Multiscale Edge Detection  
613 A New Approach to Object Recognition in Textured Images  
614 Statistical Evaluation of Fractal Coding Schemes  
616 Convex Shape Reconstruction From Noisy Ray Probe Measurements  
619 Image Enhancement Using Watershed-Based Maximum Homogeneity Filtering  
620 Compression of Palettized Images by Color  
623 Use of Boundary-Orthogonal Two-Dimensional Functions for Blocking Artifacts Reduction in Image Coding  
626 A New Stochastic Projection-Based Image Recovery Method  
627 Fast Image Search Using A Multiscale Stochastic Model  
628 A Block Shift-Variant Blur Model for Recovering Depth from Defocused Images  
631 One-Pass Vector Quantizer Design by Sequential Pruning of Training Data  
634 M.F.A.S.T.: A Single Chip Highly Parallel Architecture for Image Processing  
637 Composite Phase and Phase-Based Gabor Element Aggregation  
638 Error Bound for Multi-stage Synthesis of Narrow Bandwidth Gabor Filters  
639 Dynamic Imaging by Object Modeling and Estimation  
640 Partially Coherent Ultrasonic Imaging  
641 Chroma Coding for Video at Very Low Bit Rates  
642 On Estimating 3-D Incompressible Motion  
643 Nonlinear Constrained Least Squares Estimation to Reduce Artifacts in Block Transform-Coded Images  
645 Variable Dimension Quantization in the Transform Domain  
646 Evaluation and Synthesis of Wavelet Image Coders  
647 A New Quadtree Predictive Image Coder  
650 Buffer Constraints in a Variable-rate Packetized Video System  
652 On Merging Hidden Markov Models with Deformable Templates  
653 A Classification Method for Adaptive Transform Image Coding  
655 Efficient Edge-Preserving Regularization for Limited-Angle Tomography  
656 Spatio-Temporal Filters for Transparent Motion Segmentation  
657 Spectral Segmentation and Multiple Frequency-Band Tomographic Backward Propagation Technique for High-Resolution Sonar Imaging  
661 Fast Exposure Simulation for Large Circuit Patterns in Electron Beam Lithography  
664 Invariant Property of Contour: VPIUD for Arbitrary Images  
668 Wavetool: An Integrated Software for Wavelet and Multirate Signal Processing  
669 Low Bit Rate Colour Fractal Video  
670 Feature Point Identification and Regional Registration in Sequences of Non-Structured Texture Images  
677 Automated Facial Conformation for Model-Based Videophone Coding  
681 Wavelet-based Cosine Crossings of Signals  
682 Optimal Bit Allocations for Lossless Video Coders: Motion Vectors vs. Difference Frames  
684 Inverting Input Scanner Vibration Errors  
685 A Mixed Triangular and Quadrilateral Partition for Fractal Image Coding  
691 Two Dimensional Motion Vector Coding for Videophone Applications  
692 Recognition of Two Dimensional Objects Based on Novel Generalized Hough Transform  
694 A Grey Scale Morphological Approach for Displaced Frame Difference Coding  
695 Disparity Estimation for Stereo Sequences Based on Adaptive Size Hierarchical Block Matching  
696 Thin Nets and Crest Lines: Application to Satellite Data and Medical Images  
699 2-D Mesh Tracking with Application to Synthetic Transfiguration  
700 Interpolation and Extrapolation for Accurate Color Measurement  
703 Sensor Fusion via Expectation-Maximization (EM) on Hierarchical DBNN  
706 Rate-Distortion-Constrained Statistical Motion Estimation for Video Coding  
707 Part-Based Bayesian Recognition Using Implicit Polynomial Invariants  
709 Segmentation of Magnetic Resonance Brain Image: Integrating Region Growing and Edge Detection  
713 Dynamic Histogram Warping of Image Pairs for Constant Image Brightness  
716 A Ratio Edge Detector For Speckled Images Based on Maximum Strength Edge Pruning  
717 Speech-Assisted Lip Synchronization in Audio-Visual Communications  
718 Optimal Quadtree for Variable Block Size Motion Estimation  
719 A Fast and Area-Efficient VLSI Architecture for Embedded Image Coding  
722 Mathematical Analysis of MPEG Compression Capability and Its Application to Optimum Bit Allocation  
724 A Hybrid Filter for Image Enhancement  
725 Region-of-Interest Tomography Using the Wavelet Transform and Angular Harmonics  
727 2-D Blind Deconvolution by Partitioning into Coupled 1-D Problems Using Discrete Radon Transforms  
729 Optimal Texture Filtering  
730 Subband Image Coding Using a Fixed-Rate Lattice Vector Quantizer  
731 Lossy Encoding of Motion Vectors Using Entropy-Constrained Vector Quantization  
735 Exploiting the Common Structure of some Edge linking Algorithms: an Experimental Study  
736 Illumination Invariant Object Recognition  
740 Morphological Interpolation for Texture Coding  
741 Interpolation and Extrapolation of Image Partitions Using Fourier Descriptors: Application to Segmentation-based Coding Schemes  
742 An Efficient Technique of Texture Representation in Segmentation-Based Coding Schemes  
744 Temporal Frame Interpolation for Stereoscopic Sequences Using Object-based Motion Estimation and Occlusion Detection  
746 Motion Field Prediction and Restoration for Low Bit-Rate Video Coding  
747 Sensor-Fusion for Robust Identification of Persons: A Field Test  
748 Image Filtering Techniques and VLSI Architectures for Efficient Data Extraction in Shell Rendering  
751 Wavelet Based Image Coding via Morphological Prediction of Significance  
752 Space-Frequency Tree Segmentations for Image Coding Using Space-Varying Wavelet Packets  
754 Depth Extraction Using Lateral or Axial Camera Motion: An Integration of Depth from Motion and Stereo  
763 Temporal Image Fusion  
764 Semantic Graph and ARC Consistency in "True" Three Dimensional Image Labeling  
768 Effectiveness of Spatially-Variant Apodization for Imaging  
774 Convex MRF Potential Functions  
775 Video Compression By Motion-Partitioned Adaptive Block Matching  
783 Image Coding in the Context of a Psychovisual Image Representation with Vector Quantization  
785 A Method for Parallel Skeletonization of Images  
789 The Stability of Certain Image Restoration Problems: Quantitative

ICCV'95 is also nearing. Deadline for early registration is May 15th:  
-----

>From: [welg@ai.mit.edu](mailto:welg@ai.mit.edu) (W. Eric L. Grimson)  
>Subject: ICCV deadline approaching

This is a reminder that the deadline for early registration for ICCV 95 is May 15. Fees for registration are:

Conference Registration: Member NonMember Student  
Early Fee if paid before May 15 \$365 \$455 \$200

Fee if paid after May 15 \$440 \$550 \$250

Workshop Registration  
Context Based Vision \$80

Physics-Based Modeling in Computer Vision  
Early Fee if paid before May 15 \$100 \$125 \$60  
Fee if Paid after May 15 \$125 \$155 \$80

Representations of Visual Scenes  
Early Fee if paid before May 15 \$80 \$100 \$40  
Fee if Paid after May 15 \$100 \$125 \$70

Visual Information Management No Fee

Shape and Pattern Matching in Computational Biology  
CANCELLED

To register for the Conference, please complete and return the registration form with payment to the MIT Conference Services Office, Room 7-111, Cambridge, MA 02139 USA. The fee may be paid by check or money order made payable in US currency to the Massachusetts Institute of Technology or via credit card with the appropriate information provided. Persons paying via Mastercard or VISA may do so via fax at 617-253-7002. Your registration will be confirmed upon receipt. Details regarding on-site registration and transportation directions will be included with the registration confirmation.

Electronic copies of the registration material will be provided upon request

-----  
Early registration deadline for the workshop on representation of Visual Scenes is now extended to June 1st:  
-----

>From: [anandan@sarnoff.com](mailto:anandan@sarnoff.com) (P. Anandan x3249)  
>Subject: Early Registration Deadline extension for Workshop on Rep. Vis. Scenes

Folks,

Since our program is not expected to be completely defined before May 15, we are extending the early registration deadline for the IEEE Workshop on Representations of Visual Scenes to June 1. We will announce the program via email around May 15. Please spread the word.

Registration fees for the IEEE Workshop on Representations of Visual Scenes:

Member NonMember Student  
Early Fee if paid before June 1 \$80 \$100 \$40  
Fee if Paid after June 1 \$100 \$125 \$70

P. Anandan  
for the organizing committee

-----  
Although at first glance ISPRS congresses may not seem to be the best known for many people in our graphics recognition community, there is quite some activity (especially on the analysis of maps and its combination with other information such as aerial images, remote sensing, elevation models, ...) which is related to graphics recognition, among people active in photogrammetry and remote sensing. So I include a CFP for this congress:  
-----

>From: Mark Shortis <[mark\\_shortis@muwayf.unimelb.edu.au](mailto:mark_shortis@muwayf.unimelb.edu.au)>  
>Subject: ISPRS 1996 Congress - CFP#2

Dear Colleague(s),

This is to certify (again) that you are on the mailing list concerning ISPRS Congress 1996. For further information look from time to time to the home page of the WWW with the browser - URL

<http://www.ipf.tuwien.ac.at/isprs.html>

The announcement for exhibitors is printed. For requests please use my email.

\*\*\*The Second Announcement is being printed (for distribution from May 1995 onwards) where you will find all the necessary information, the forms for registration, hotel reservation, and also the call for papers, and the Form for Abstracts. It will inform you about details. YOU ARE ON THE MAILING LIST (if you have sent us your full postal address).

\*\*\*The Second Announcement and other useful information you may receive also from [congress@mondial.via.at](mailto:congress@mondial.via.at)

Many authors wish to have the informations about the submittance of papers already now. So I have prepared - and updated - the following summary:

The Council of ISPRS agreed to the following procedure: You are asked to submit extended abstracts of 750 to 1500 words length (or the full paper),

\*\*\*or of 750 words and of one page with graphics, together with the Form for Abstracts (follows attached). Both please send to me, if without illustrations - you may send it by email in advance. But, as you can see from the Form for Abstract, we need your signature, and that is the reason, why we need it anyhow by (air)mail.

The deadline for the receipt of extended abstracts is 15 October 1995.

These abstracts may be written in one of the three official ISPRS languages, in English, French, or German, and they have to contain enough detail to clearly convey the approach and the results of the research, the idea behind your proposal, the very reason, why you think your report or application being an interesting message for others. The topics of your paper or the paper itself should not have been published before in one of the main journals for photogrammetry and remote sensing, please submit only original material. Your paper should contain some new idea, some new method, something really interesting, some important news for the reader. Papers are to be written for

the reader, not for the author(s)! And the abstract should present already the main topics, facts, and results, not only the contents. The reader is in hurry like you yourself, when you are searching for interesting things in thick journals. Write papers of such a type you wished to read or study yourself.

The extended abstracts are the basis for acceptance, which is the responsibility of the Commission Presidents who cooperate with their Working Group Chairmen.

Together, they are responsible for the reviewing. The papers will get a remark line at their end saying e.g.:

Received (Date). Reviewed and accepted by Comm.X as Invited Paper by (Name) or

Received (Date). Accepted by Comm.Y for Poster presentation by (Name)

There will be, as always, different classes of papers. (I use the abbreviations within my software:)

K \_Keynote Papers will give rather general views, overall surveys, and visionary aspects of the future. They are papers of major importance.

I \_Invited Papers are good for summaries and thorough treatment of wider areas

as well as for introduction of new fields. Both types of papers are to be presented orally, and both will be written at special invitation, only.

O,P..Presented papers for \_Oral or \_Poster presentation,

N \_National Reports, therefore the Council will release special and new rules, and other papers

A \_Accepted for the archives, only. The class A does not mean any devaluation.

It is an honour to publish in the ISPRS Archives. The Commission Presidents will organize compact sessions. It is well possible, that a very valuable paper does not fit to any of the sessions, that there are more top papers than time available within sessions, and that the topic is not suited for poster presentation. For presentations as I, O, or P there might exist also a W \_Waiting list for papers which are supposed to fill a gap, because the one or the other paper might not come in time or the author might become ill, etc.

For the

R \_Rejection of papers, the Commission Presidents are the responsible ones.

There is no correspondance possible with the Programme Management about acceptance of rejected papers, only with the Commission Presidents or with their co-responsible Working Group Chairmen. Please, be cooperative and accept

their decision.

For the coming congress only one paper is accepted for one registered participant. For a second paper you need another registered participant as co-author, who has no paper himself. Only the Congress Director can make well-founded exceptions. Further your paper will be accepted for the Archives as well as for presentation only, if your REGISTRATION fee has been PAID latest on the

deadline date for the full paper, which is 10 April 1996.

We all know about colleagues, who just wish to show up in the proceedings, but are No Shows at the congress. This causes unnecessary work for the organization, costs money, and the archives get heavy instead of the international journals.

Please, plan in time, secure travel and accomodation funding prior to submittance of abstracts. Paying or submitting after the deadline means that your paper will not be accepted and not printed and not presented. Of course you will remain a most welcome guest at the congress! And many will thank you for non submittance of a paper as the Archives will not become too heavy. On the other hand, if you have something important or interesting, please submit an extended abstract for the reviewers, the earlier the better, together with the FORM FOR ABSTRACTS, which you will find in the Second Announcement. It is attached also here. Fill in then this form and send it together with the abstract to me. ( Put nice stamps on the envelope, that makes me happy. But unfortunately we have now email and fax, also.)

Make sure in time that any Government or Company Clearance to present and to publish is final at the time of submittance.

Again there will be the possibility for single authors to apply for the PRIZE FOR BEST PAPER OF YOUNG AUTHORS. Authors must be born on or after 1 July 1961. At least four, may be ten Prizes will be donated by the Japanese Society of Photogrammetry and Remote Sensing, 2500 sfr for each recipient. Applicants should deliver an age proof and an additional copy of the full paper for the ISPRS President

not later than 5 Jan 96 (Deadline).

Their registration must be finalized and a down payment transferred to Vienna

not later than 15 Jan 96 (Deadline)

This downpayment has to be 2000 ATS for non-students and zero for students and corresponds to the reduced registration fee due for winners of the prize. The Winners will be informed by the President of ISPRS after 31 March 96. The Treasurer of ISPRS will send funds to Winners after 30 April 96.

The Commission Presidents' deadline to decide about the status of the papers of all other authors is 15 February 1996.

Upon receipt of your abstract I shall send you the Authors Kit, the ISPRS Guidelines for the preparation of the manuscript together with other relevant information.

Latest then finish the manuscript, camera-ready, STRICTLY according to the ISPRS Guidelines for Authors.( We shall put it also into WWW ! ). The shorter the paper the better. The maximum length allowed for Invited Papers is 12 pages. Presented papers ( \_O, \_P ) should not exceed 6 pages. We have to charge the author for any excession to ensure that the high printing costs will be covered. The page charge will be ATS 500.-

Colour pages will be possible at the end of the relevant volume of the Archives. Authors have to submit the four-colour-separations and pay 2000 ATS per page. That is expensive, in fact we dont want the work with colour pages, but if someone wishes to add colour pages we can and will do it, and best quality is assured.

Except the YOUNG AUTHORS, who have to be faster (See above), send the camera ready manuscript to me, with nice stamps, of course, don't use fax nor email!, so that I get it

AS EARLY AS POSSIBLE, ( help us, please, to minimize our night work )

BUT I MUST HAVE IT ON THE DEADLINE DAY, 10 APRIL 1996.

These, I hope, are the most important rules you need to know now. This edition is from April 25, 1995.

With best regards

Peter Waldhaeusl

Technical Programme Coordinator  
ISPRS Congress Vienna 1996

PS: Please trash all prior edition(s), also those dated January 1996(!!!!)

Appendix:

XVIII INT. CONGRESS FOR PHOTOGRAMMETRY AND REMOTE SENSING  
VIENNA, AUSTRIA, 9 - 19 JULY 1996

FORM FOR ABSTRACT

Author for correspondence: \_\_\_\_\_  
Institution: \_\_\_\_\_  
Address: \_\_\_\_\_  
Country (Code): \_\_\_\_\_ CIP-Code and Town: \_\_\_\_\_  
Tel.: \_\_\_\_\_ Fax: \_\_\_\_\_  
Email: \_\_\_\_\_

Co-Authors' Names: \_\_\_\_\_

Speaker's Name: \_\_\_\_\_ Presentation Language: E / F / G \*  
For presentation is requested: Overhead Projector\*/Slide Projector 24x36mm\*  
Video Projector\* or Other(specify: ) \_\_\_\_\_ Slide Projector 55x55mm\*  
Title of Paper: \_\_\_\_\_

\*\*\*An EXTENDED ABSTRACT (750-1500 words or 750 words plus one page graphics) is attached.

Proposed Paper Type:\* K Keynote Paper (oral) (At invitation, only)  
I Invited Paper (oral) (At invitation, only)  
O Presented Paper (Oral)  
P Poster (also shortly oral)  
N National Report

Proposed Commission Nr. \_\_\_\_\_ Proposed Working Group Nr. \_\_\_\_\_  
Alternative \_\_\_\_\_ Alternative \_\_\_\_\_

I apply as the single author of this paper for review for the Prize for Best Papers by Young Authors: YES / NO \* (Applicable for participants born after 30 June 1961). I know that in this case the deadline for the submission of full paper is 5 January 1996, for registration and payment 15 January 1996. I shall pay as down payment the reduced rate for winners, i.e.2000 ATS \*. As a student I have to pay NO \* down payment.

I am interested in publishing colour illustrations on \_\_\_\_\_ pages within the Appendix at the end of the respective Archives' volume at cost of only 2000 ATS per page, if four-colour-separations will accompany the manuscript.

I SHALL / SHALL NOT\* prepare my paper by computer aided word processing and therefore I DO / DO NOT\* request model paper sheets in order to comply with the strict formal requirements for camera-ready manuscripts. Authors will receive complete and detailed informations after receipt of abstract, in any case not later than by 15 February 1996.

This is the only Paper of the (Co-)Author \_\_\_\_\_ (Name) who will be a registered participant of the XVIII. Congress of ISPRS. I know that his registration fee and the camera ready manuscript must be in Vienna prior to deadline 10 April 1996.

\_\_\_\_\_  
(Date) (Signature)

The extended abstract and this form must be returned BY POST/AIRMAIL not later than 15 October 1995 to
